

Each loop version adds a cumulative bundle to the one before — v7 → v8 → v9

V7 loop

23 files · #6bbd94a1...

New in this version:

Bootstrap once → drive many

the core loop mechanism

Isolated per-run CS workspaces +bundle

one clean workspace per run

V8 loop

27 files · #331d802b...

New in this version:

OPT-1 context-composer

tailors the brief per question

Codex multi-lens critique +bundle

cross-vendor review at 2 gates

Gate-2 figure-quality add-on

checks figures before release

Inherited from earlier:

Bootstrap → drive-many

Isolated CS workspaces

V9 loop

28 files · #c92973d8...

New in this version:

Codex effort high / xhigh

deeper cross-vendor critique

Hard multimodal Gate-2

must pass images to proceed

CS-reconnect procedure

recover a dropped CS session

Inherited from earlier:

Bootstrap → drive-many

Isolated CS workspaces

OPT-1 context-composer

Multi-lens critique (2 gates)

Gate-2 figure add-on

Each step bundles several changes at once, so a version-to-version difference (e.g. v8 – v7) reflects the whole bundle, not a single isolated variable (operator ruling). Deeper blue = later loop.
