

Same question, two different answers — an open comparison

exp-003 · one genome-scale CD4⁺ T-cell dataset · no winner declared

“

Starting from this genome-scale CD4⁺ T-cell Perturb-seq dataset, identify a natural metabolite or nutraceutical that could be used to treat patients with an autoimmune disease of your choice. Present your results, methodology, scientific rationale, and an optimal pilot experiment to test your prediction.

— the verbatim question, delivered byte-identical to both arms

n = 1 answer per arm · not scored, not blinded · claims as reported by each arm (not independently re-verified) · both drug–target pairs corroborated in external pharmacology
